(54) FACSIMILE EQUIPMENT AND PICTURE DATA TRANSMISSION SYSTEM CONSISTING OF THE SAME AND OF DATA TERMINAL

(57)Abstract:

PROBLEM TO BE SOLVED: To enable picture data to be directly transmitted from facsimile equipment to another data terminal on a network to which this data terminal is connected by way of the data terminal.

SOLUTION: Even when a communication mode is set by a communication mode setting switch 52, it is made possible at an operation part 5 to accept transmission destination information (an ID number) of a data terminal 15 other than a personal computer 14 on a LAN 16. After the transmission destination information is accepted and document data are read by a picture reading part 2, there document data and the transmission destination information are transmitted to the personal computer 14 by way of an interface part 9. In the personal computer 14, the document data are transferred to the data terminal 15 corresponding to the transmission destination information by way of the LAN 16. By enabling the transmission destination information together with the document data to be transmitted to the personal computer 14, the document data are easily transmitted to the data terminal 5 on the LAN 16.
